induSENSOR // Linear inductive displacement sensors

- Measurement ranges 75 ... 630mm
- Linearity $\pm 0.3\%$ FSO
- Integrated microelectronics
- High pressure resistance
- Oil resistant and maintenance-free
- Short offset ranges

The sensor elements of the EDS series are protected by a pressure resistant stainless steel housing. The sensor electronics and signal conditioning are completely integrated in a sensor flange.

As a target an aluminium sleeve is used which is integrated into the piston rod and is passed without making contact and wearfree over the sensor rod.

Due to the use of the eddy current principle, no permanent magnets need to be mounted inside the cylinder.

Due to the rugged design of the long-stroke sensors of the EDS series, these sensor systems have proven themselves, not only through the integration in hydraulic and pneumatic cylinders, but especially under harsh industrial conditions.

Typical applications

Long-stroke sensors in the EDS series are designed for industrial use in hydraulic and pneumatic cylinders for the displacement and position measurement of pistons or valves, e.g. for the measurement of

- displacement, distance, position, gap
- deflection
- movement, stroke
- filling level, immersion depth, spring travel
